Dear Paul:

Subject: London Cubicle Building Layout

Enclosed is a recommended layout for the Cubicle Building which will give you the best layout of equipment, space for people, and result in the least modification to the existing structure. The last factor will also result in minimum cost as far as can be estimated and should meet all British work space regulations that we are aware of. Please review with Frank Gilbert, BBC, and others that might have an input.

The first three drawings show the recommended space allocations. These are followed by the anticipated changes that are required. The designators come from BBC drawing number 254, revision C concerning site 109. Presume this is available to you. Following are two alternates that were considered but rejected for various reasons.

At the present state of planning a raised floor is being dropped from consideration. This will mean running cabling to the top of the racks which should be no particular problem.

Would appreciate your comments after review.

Sincerely,

STAT
